BenMAP Introduction

BenMAP-CE is an open-source computer program that calculates the number and economic value of air pollution-related deaths and illnesses. The software incorporates a database that includes many of the concentration-response relationships, population files, and health and economic data needed to quantify these impacts.

BenMAP Highlights

- o Proven software that estimates the health impacts and economic value of changes in air quality.
- o Powerful enough to perform a full-scale benefits assessment, but easy enough for beginners to use.
- o Open-source to encourage community ownership.

BenMAP Thai dataset

In year 2022, CCAS initiatives the development of BenMAP application with Thai database, to support academia and governmental officers as a tool for policy development.
